Honeywell Barcode scanners

Get started

Welcome

Thank you for your purchase of a Honeywell barcode scanner from Onslip! In this guide we will help you connect your scanner to your computer for registering products, and connect to cash register for usage.

Connect to computer

For adding barcodes of your products on Backoffice, connect your scanner to any available USB port on your computer. Scan the barcode below. To the left of the barcodes you will find information of what barcode to scan for your specific device. To identify the product name of the scanner you received please see the first page of this guide.

This code is specific for Windows.
Only applies to Genesis 7580g.

This code is specific for Mac computers.
Only applies to Genesis 7580g.

Code applies to both windows and mac computers.
Only applies to Hyperion 1300g.

Now you can scan the barcodes for when you change products in Backoffice. The barcode field is automatically filled in with the code you scan.

Any questions so far? Please visit our support page for FAQ information at <http://support.onslip.com/>.

Connect to cash register

When you are done adding barcodes for your products in Backoffice you are ready to connect the scanner to your cash register. Scan the barcode to the right and remove the USB cable from your computer.

Connect the USB cable to any free UBS slot on the cash register. If you are using a tablet as the cash register connect the USB cable to the integration module provided in your cash register package.

On the cash register press the menu button at the top left corner and choose Settings and then devices. Press the icon on the top right and in the menu choose Connect Automatically. Make sure you see the barcode scanner as a blue "button". Close the window and the settings are automatically saved.

Your barcode scanner is now configured to your cash register and you can begin to use it.

Any questions? You are welcome to visit our support page online for more information.
